

Privacy, Security & Risk Register

1.1 Privacy and Security Considerations: StudyMate AI may process user-provided academic questions and study materials. The application should follow a data-minimization approach and only collect or retain information that is necessary for the product experience.

The following information should not be exposed directly to the browser:

- AI provider API keys.
- Database credentials.
- Private server environment variables.
- Internal service credentials.
- Other sensitive server-side configuration.

User-provided content should be handled carefully, and the product should avoid requesting unnecessary personal or sensitive information. AI-generated information should be clearly treated as generated content rather than guaranteed factual information. Users should be able to review generated study materials before saving or relying on them.

1.2 Risk Register

Risk	Impact	Mitigation
AI generates inaccurate information	High	Clearly identify AI-generated content and provide review, editing, rejection, and regeneration options.
API key is exposed to the browser	High	Keep AI provider credentials in server-side environment variables
